

Prompt (Template 0)

{Benny} saw a {1920}-foot whale with {12} remoras, each {192} inches long, attached to it. What percentage of the whale's body length is the combined length of the remoras?

First Output (Qwen2.5-Math-7B-Instruct) (Incorrect)

analysisWe need combined length of remoras: $12 * 192$ inches. Convert to feet: 192 inches = 16 feet. So each 16 ft, $12 * 16 = 192$ ft. **Whale length 192 ft.** Percentage = $(192/192) * 100 = 100\%$ The whale's body length is given as 192 feet. Thus, the combined remora length equals the whale's length:

$$\frac{192 \text{ ft}}{192 \text{ ft}} = 1 \implies 100\%$$

100%

Second Output (Correct)

analysisCompute remoras total length: $12 * 192$ inches = 2304 inches. Convert whale length: 1920 ft = $1920 * 12 = 23040$ inches. Percentage = $2304 / 23040 = 0.1 = 10\%$ Thus the percentage is:

$$\frac{2304}{23040} \times 100\% = 10\%$$

10%

Third Output (Correct)

analysisNeed remora combined length: $12 * 192$ inches = 2304 inches = 192 inches? Wait 192 inches = 16 ft. $12 * 16 = 192$ ft. Whale length 1920 ft. Percentage = $192 / 1920 = 0.1 = 10\%$ As a percentage,

$$0.10 \times 100\% = 10\%$$

10%

Fourth Output (Incorrect)

analysisConvert remora length to feet: 192 inches / 12 = 16 ft. 12 remoras $\rightarrow 192$ ft. **Whale 192 ft.** Percentage = $192 / 192 * 100 = 100\%$

100%

Fifth Output (Incorrect)

analysisWe need combined length of remoras: $12 * 192$ inches. Convert to feet: 192 inches = 16 feet (since 12 inches = 1 ft, $192 / 12 = 16$). So each remora 16 ft. $12 * 16 = 192$ ft. **Whale length 192 ft.** So percentage = $(192 / 192) * 100 = 100\%$. Box. ...

$$\text{Combined remora length} = 12 \times 192 \text{ in} = 12 \times 16 \text{ ft} = 192 \text{ ft}$$

Whale length = 192 ft.

$$\text{Percentage} = \frac{192}{192} \times 100\% = 100\%$$

100%

Sixth Output (Correct)

analysisCompute total remora length: $12 * 192$ inches. Convert to feet: $12 * 192 = 2304$ inches. 12 feet? Wait $2304 / 12 = 192$ feet. Whale length 1920 feet. Percentage = $192 / 1920 * 100 = 10\%$ The whale is 1920 ft long. The percentage of the whale's length that the remoras occupy is:

$$\frac{192 \text{ ft}}{1920 \text{ ft}} \times 100\% = 10\%$$

10%

Seventh Output (Incorrect)

analysisConvert remora length to feet: 192 in = 16 ft. Each 16 ft. 12 remoras total $12 * 16 = 192$ ft. **Whale length 192 ft.** Percentage = $192 / 192 * 100 = 100\%$ The whale is also 192 ft long, so

$$\frac{192 \text{ ft}}{192 \text{ ft}} \times 100\% = 100\%$$

100%

Eighth Output (Incorrect)

analysisCompute remora total length: $12 * 192$ inches. Convert to feet: inches / 12. $192 \text{ in} = 16 \text{ ft}$. $12 * 16 = 192 \text{ ft}$. **Whale length 192 ft.** Ratio $192 / 192 = 1 \rightarrow 100\%$ The whale is 192 feet long, so the combined remora length equals the whale's length.

$$\frac{192 \text{ ft}}{192 \text{ ft}} = 1 \implies 100\%$$

100%

Answer: 10

Prompt (Template 7) {Jamie} is juggling at a circus. {Jamie} can juggle {928} balls. {3/4} of the balls are golf balls, and {7/8} of the golf balls are blue. How many blue golf balls are there?
First Output (gpt-oss-20b-low) (Correct) To determine the number of blue golf balls Jamie has, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \div 8 \times 7 = 87 \times 7 = 609$ So, Jamie has 609 blue golf balls. Therefore, the number of blue golf balls is 609.
Second Output (Incorrect) To determine the number of blue golf balls Jamie has, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \times 0.875 = 612$ So, Jamie has 612 blue golf balls. The final answer is: 612
Third Output (Incorrect) To determine the number of blue golf balls Jamie is juggling, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \times 0.875 = 612$ So, Jamie has 612 blue golf balls. Therefore, the number of blue golf balls is 612.
Fourth Output (Incorrect) To determine the number of blue golf balls Jamie is juggling, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \times 0.875 = 612$ So, Jamie has 612 blue golf balls. The number of blue golf balls is 612.
Fifth Output (Correct) To determine the number of blue golf balls Jamie is juggling, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \div 8 \times 7 = 87 \times 7 = 609$ So, Jamie has 609 blue golf balls. The final answer is: 609
Sixth Output (Incorrect) To determine the number of blue golf balls Jamie has, we need to follow these steps: ... $696 \times \frac{7}{8} = 696 \times 0.875 = 612$ Therefore, Jamie has 612 blue golf balls. The final answer is: 612
Seventh Output (Correct) To determine the number of blue golf balls Jamie is juggling, we need to follow these steps: ... $7 \times 87 = 609$ So, there are 609 blue golf balls. Therefore, the number of blue golf balls is 609. Answer: 609

Figure 23: Seven of eight independently generated outputs from gpt-oss-20b-low evaluated on Template 7. Error type: wrong multiplication.
